Summary

With a background in Philosophy and Psychology, I bring a deep understanding of how people think, interact, and make decisions to my work in web development.

Starting with a focus on UX/UI, I transitioned into full-stack development, allowing me to bring full-stack web applications to life from concept to deployment.

I specialize in building scalable, performant, and accessible web applications using technologies like Next.js, React, the MERN stack, Laravel, ASP.NET, and Remix. I'm also highly comfortable with Tailwind CSS, Bootstrap, Prisma, SQL, and PostgreSQL, and I use tools like Figma to bridge the gap between design and code.

Work Experience

Web Development Intern
Lodestone PM – Toronto, ON | May 2025 – Present

- Developed and maintained full-stack web applications using **TypeScript**, **React**, **Remix**, and **Prisma**, focusing on performance and scalability.

- Collaborated closely with senior developers to design, debug, and deploy features across **staging and production environments**.

- Integrated **RESTful APIs** and third-party services, including AI-driven prompt generation tools, to enhance core application functionality.

- Adapted and implemented **multi-row table editing** features, and collaborated on the design of intuitive UI elements to streamline complex user interactions.

- Contributed to team code reviews, feature planning, and sprint retrospectives in an **Agile** development workflow.

- Wrote clean, maintainable code and laid the foundation for future feature implementation.

- Used **Git** and **GitHub** for version control and collaborated across teams using **Slack** and other communication tools.

Education

Humber College – Web Development (2024 – 2025)

Dean's List graduate in the Web Development Continuing studies program.

McMaster University – (2014 – 2019)

Graduated with Honours in Philosophy and Psychology maintaining a 3.5 GPA.
